GRAND CANYON WEST RESORT MAY 13, 2009

Reliable Security is pleased to announce the completion of the Hualapai Grand Canyon West Resort facility in Arizona. This incorporates IndigoVision and IP security throughout the many areas of the Grand Canyon West Resort to include the hotel, Eagle Point, Guano Point and the airstrip terminal.

As a side note, the terminal at Grand Canyon West is the 4th busiest commercial airport in Arizona.

The IndigoVision system uses H.264 and is delivered to the various facilities via Hughes satellite. This requires extremely low bandwidth. The picture quality is excellent, allowing both on site recording and live viewing. This is the first system in the nation to be totally interconnected by satellite with the administration for the system from tribal headquarters in Peach Springs.

The owner is pleased with the project and Reliable is happy to have been part of this groundbreaking project showing the true power of IP cameras vs. analog and the advantage of H.264 codex with very low bandwidth.
